Description

Manufactured in Taiwan

Fully automatic and intelligent HMI touch screen programmable NC control accepts many different job quantities and lengths complete with hydraulic vice clamping and hitch feed system

Functions:

1. AUTOMATIC KERF COMPENSATION: Blade thickness for multiple indexing: This function allows and calculates the blade thickness into the programmed cut length so you achieve your desired length required (factory pre-set)
2. AUTOMATIC LOCATE TRIM CUT: When the material is placed in rear vice and this function is selected the machine will automatically find the material end and set up trim cut to the programmed value
3. "SAVE-A-BLADE": To prevent carbide blade tooth deformities. This function retracts the material back approx 3mm away from the blade preventing the carbide blade teeth rubbing on the material on the return after completion of cut. This is activate via selecting the carbide blade function on the control panel
4. AUTOMATIC MATERIAL ZERO POINT LOCATION: This function automatically finds the start point of the material preventing unnecessary trim cut waste
5. AUTOMATIC SHUT-OFF: For finished jobs or out of stock
6. SIMPLIFIED SELF DIAGNOSTICS: Error code display
7. LCD SCREEN: With touch screen display

Features

- Bundle and single cutting mode switch includes bundle cutting clamps (nesting fixture)
- Idle wheel motion proximity switches shuts off machine if blade breaks or slips
- Trim cut function: cuts material end (zero point) in auto or manual mode
- Automatic material location (zero point) to reduce unnecessary trim cut waste
- Coolant system incorporating a wash down hose with trigger gun
- Back-tilted saw frame for longer blade life
- Inverter controlled infinitely variable blade speed 20-100mpm
